

AI Workflow Cost & Capacity Test

ORNL Brand Agent V2.3.2 | Test 04: heavy-duty EV graphic
Model: GPT-5.6 Sol | Mode: Thinking | Effort: Mini

One run used 2% of one user's monthly allowance, allowing up to 50 comparable runs per month.

10 CREDITS PER RUN	\$0.40 DISPLAYED ESTIMATE PER RUN	2% OF 500 MONTHLY CREDITS	50 MAX RUNS PER USER PER MONTH
-----------------------	--------------------------------------	------------------------------	-----------------------------------

Monthly capacity assumes all 500 credits are available for this workflow. A 50% reserve leaves capacity for 25 full runs.

Observed result

REJECTED CONCEPT 0 QA-passing outputs	The model identified the returned concept as rejected because it introduced unapproved headline and callout copy plus unauthorized ORNL logo treatment. This run is therefore recorded as 0 quality-assurance-passing outputs.
--	--

Leadership interpretation

Capacity: 10 credits per run allows up to 50 comparable runs per month - before any other credit-consuming work.	Comparison: Cost matched Instant and was half the Light and Standard tests: 10 vs. 20 credits and \$0.40 vs. \$0.80.	Use: Mini reduced measured cost, but produced no quality-assurance-passing output in this run. Repeat before comparing cost per usable output.
--	--	--

Standard scorecard for future tests

REPORT EVERY TIME	STANDARD CALCULATION OR RULE	THIS TEST
Run boundary	One fixed task from submission through final stop, including model retries or repairs	1 measured request; 2 outputs supplied
Measured cost	After value minus before value; report only the delta	10 credits / \$0.40
Allowance share	Credits per run divided by 500	2%
Monthly capacity	Floor of 500 divided by credits per run	50 runs/user maximum
Output status	Result category plus number of quality-assurance-passing outputs	Rejected concept / 0 passed
Elapsed time	User-visible task time	Not supplied

After repeated runs: add median credits per run, quality-assurance pass rate, and credits per usable output. Those measures are more decision-useful than a single-run dollar estimate.

Source basis: measured 10-credit and \$0.40 dashboard deltas for this run; 500-credit monthly allowance supplied by management. The dollar figure is the dashboard estimate and may not equal an incremental invoice charge. Generated output remains subject to ORNL content-owner and brand review.

ORNL Brand Agent V2.3.2

project-brief.md

can you produce a draft to help me get started with this project?

CONVENTIONAL ELECTRIC DRIVE SYSTEM

- More component stress
- Lower reliability
- Shorter system life
- Less smooth operation

ORNL INNOVATION TWO INVERTERS. A SMOOTHER RIDE.

- Reduced component stress
- Greater reliability
- Longer system life
- Smoother operation

CLEANER POWER STRONGER TOMORROWS

ADVANCED ELECTRIC DRIVE SYSTEMS FOR HEAVY-DUTY APPLICATIONS

OAK RIDGE National Laboratory

I drafted the visual direction from your project brief, but I'm not treating the generated image as a usable draft because the image tool introduced unapproved headline/callout copy and an unauthorized ORNL logo treatment. The brief supports the comparison, heavy-duty truck, charger → batteries → inverters → motor flow, opposite-phase cancellation, and the reliability/efficiency benefits, but it does not supply exact public-facing copy or approved logo artwork.

The underlying concept I'd carry forward is a **clean split comparison**: conventional system in red versus the ORNL-improved system in green, with the two inverters visibly working in opposition and the electrical disturbance becoming visibly calmer downstream. A Class 6–8 truck serves as the shared heavy-duty application anchor, while the benefit story is communicated primarily through the visual treatment rather than lots of text.

I'd treat the current result as a rejected concept proof rather than a deliverable, consistent with the brand controls in the knowledge guide.

ChatGPT can make mistakes. Workspace data isn't used to train models.

Conversation result identifying the returned concept as rejected under the quality controls

OUTPUT FILE 1

OUTPUT FILE 2

The two supplied PNG files are distinct; the conversation does not explicitly label their sequence. Evidence only; generated graphics and logo-like treatments are not approved ORNL artwork.
